

17 October 2011

Cincinnati, Ohio and Cedarburg, Wisconsin

We are proud to announce today that BHE Environmental and Cedarburg Science have agreed to combine corporate resources to enhance our collective abilities in providing outstanding environmental management, science and engineering services throughout the United States. In this new corporate structure, Cedarburg Science will become fully integrated in to BHE.

BHE's President John Bruck said "We're excited to have Cedarburg Science join forces with BHE. It is a perfect alignment of staff skills and service offerings, geography, and strategic outreach to our client base, including renewable energy, pipelines, Department of Defense, manufacturing and other important markets. We've teamed very well with Cedarburg Science during the past several years, and this will allow us to be even more cost efficient and technically competitive moving forward."

Ginny Plumeau, Cedarburg Science's President and Principal Ecologist said "We are very pleased to combine our talents and resources with BHE. We have enjoyed a great working relationship with BHE technical professionals. We have been looking forward to the opportunity to offer expanded capabilities to our existing clients, such as Endangered Resource Biological Assessments, NEPA studies, utility permitting, enhanced restoration planning and implementation, and in-demand wildlife surveys. We will continue to maintain our highly skilled staffing and strength in Cedarburg, WI and in Peoria, IL, while gaining an increased regional and national presence."

As a BHE Vice President, Ginny will lead BHE's Natural Resources Management Group from her office in Cedarburg, Wisconsin.
